Call Script- contacting other people/friends and family:

Acetaminophen is one of the country's most popular over-the-counter pain relievers, but there is a concerning link to the development of autism. Although most infants and children are probably safe when taking acetaminophen, current evidence indicates that many infants and children, especially boys, experience types of inflammation that, when combined with acetaminophen, lead to the development of autism. We have reason to believe that the largest window of vulnerability to acetaminophen-induced autism is from birth up to an infant's first five days of life. Therefore, we must raise awareness for parental support systems, expecting families, and their loved ones so they can have the knowledge they need to make informed decisions. We need your help to get the word out, so contact your representatives, friends, and family today! Use our script templates to make the necessary calls for necessary changes.

❖ Hey _____, do you have a second/is there a time when we can talk about this new medical research I came across? There's quite a few studies out now that show support for a link between acetaminophen and autism. One of the leading advocates for this information, WPLab, has in their mission statement that they believe (without any reasonable doubt) that the active ingredient in Tylenol, acetaminophen, is responsible for many if not most cases of autism. Since 1 in 36 people are diagnosed with autism, and the potential burden of having a person with autism in a family is huge, I think it's worth doing more research on this. Is there anyone you know that could benefit from knowing this information? According to WPLab, "there is currently no known safe dosage level of acetaminophen for babies and children". As it stands, the perceived window of greatest vulnerability to acetaminophen exposure in infants is right before and after birth. Thanks for taking the time to let me share this info, and I'd love to hear your thoughts on the matter. Please let me know if there's any resources that you'd want me to share with you!
